## **Brake That Car!**

#### **Background**

The structure of something affects how it functions. You learned in 3<sup>rd</sup> Grade that some structures of animals affect how they function. One of the best examples of this is how different birds have adapted beaks, enabling them to hunt for food in different

ways. In this science unit, you have found that the structure of plants also affects their function. One example are the sharp thorns on a cactus, which help them defend themselves.

Likewise, humans design and construct all sorts of things, including machines, houses, building, and toys. The structure of these things affects their function. Engineers always think carefully how the structure of what they are working on will solve the problem (the function).

#### **The Challenges**

Using your science knowledge and your engineering skills, your team will design and construct a wooden car from the materials provided. Keep in mind that the structure of the car will affect its function. Your car needs to be adjustable so that it can successfully function in two different contests:

#### Need For Speed

→ After rolling down a ramp, your car should travel as far as possible

#### On The Spot

→ After rolling down a ramp, your car should stop at a designated spot on the floor

#### **Rules and Information**

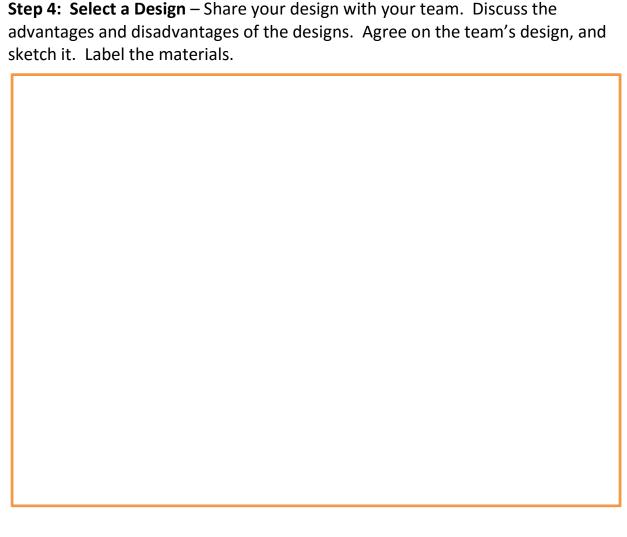

1. Your teacher will tell you how much time your team has to design, construct, and test your wooden car. The contests will occur after that.

- 2. When it is your team's turn to compete on Brake That Car Contest Day, your team will:
  - a. explain to the class how your car is intended to work.
  - b. have three tries at the "Need For Speed" contest. The teacher will measure the distance each time, and you will record the distances.
  - c. have only <u>90 seconds</u> after your teacher tells you the result of the third trial of the "Need For Speed" contest, to place your car on the ramp for the "On The Spot" contest (during the 90 seconds, you will make adjustments to the car)
  - d. have three tries at the "On The Spot" contest. The teacher will measure the distance each time, and you will record the distances.
- 3. All molecules of the car and cargo must be behind the ramp's red starting line when the car is released (**not pushed**).
- 4. The teammate who releases the car may only use one hand.
- 5. Three or four of the car's wheels must be touching the ramp when released --nothing else may be touching the ramp when the car is released. All cargo must
  be touching the car prior to the release. After it is released, it is permissible for
  cargo to fall off the car.
- 6. Nothing can "hook" onto the ramp.
- 7. The designated spot for the car to stop is 30 cm from the bottom edge of the ramp.
- 8. All distance measurements will be made to the middle of the front of your team's car.
- 9. The materials provided to your team are:
  - One block of wood (approximately ¾" x 2½" x 6", with a hole)
  - 4 wooden wheels
  - 2 wooden dowels (each about 4" long)
  - One piece of string (about 48" long)
  - One piece of felt (about 6" x 6")
  - 2 straws
  - One 200 g hooked mass
  - One push pin
  - Other supplies that can be used: Paper, glue, masking tape, up to 6 paper clips, up to 6 rubber bands
- 10. Other materials commonly found in your classroom may be included on your car, but prior approval must be obtained from your teacher.

## **The Engineering Design Process**

**Step 1: Identify the Problem -** In your own words, write a sentence describing each problem you need to solve.

Need	For Speed:
On Th	an Creati
On In	ne Spot:
	ainstorm – Brainstorm design ideas with your teammates. Share you but don't discuss details.
Step 3: De	sign – After brainstorming, each team member should take a few
<del>-</del>	think individually about the best way to meet the challenges. Each
	ber should then sketch his/her design ideas. It is helpful if the
materials a	
materials a	re labeled.

**Step 5: Construct** – Gather the materials and build the car. New ideas or suggestions may emerge from you or your teammates. Include them while building if your team agrees on them.

**Step 6: Test and Evaluate** – When your team is ready, ask your teacher for permission to test your car using the ramp. You may have to take turns with other teams. Your team should observe your car carefully, and evaluate how well it performs. Your team should discuss ways to modify the car, make the modifications, and re-test it if you have time.

#### IT IS NOW TIME FOR THE CONTESTS!

# Brake That Car Contest Day

## Contest #1: Need For Speed

	Distance the Car Travels from the Edge of the Ramp (in cm)
Trial #1	
Trial #2	
Trial #3	

Observations about your car's performance in "Need For Speed":

### **Contest #2: On The Spot**

		Distance the Car	Observations about your car's performance in
		Stops from the	"Need For Speed":
		<b>Designated Spot</b>	
		(in cm)	
	Trial #1		
	Trial #2		
	Trial #3		

#### Your Feedback Is Needed

The "Brake That Car!" task is new to your school this year. Your school's principal would like feedback on how well it worked and what changes should be made for next year's students.

In the space below, write a draft of a letter to your school's principal. This letter should briefly describe the task, how well your car worked, and what changes you recommend be made to "Brake That Car!" for next year's students. Give the draft letter to your teacher to get feedback before writing the final draft.

Finally, send your final draft of the letter to the principal. The final draft can be an email or a letter typed on a computer (and then printed). Be sure to include your name and your teacher's name in your letter.									

## **Brake That Car Evaluative Feedback**

Student Name:									
Check the statement that best describes the quality of the student's teamwork for Brake That Car.									
<pre>C = Consistently U = Usually I = Inconsistently R = Rarely</pre>									
	С	U	Ι	R					
Team Work - Worked collaboratively with teammates									
<b>Building</b> – Successfully contributed to the building of the team's car with no assistance from the teacher									
Participation - Actively participated in all aspects of the task									
<b>Sportsmanship</b> – Demonstrated good sportsmanship during the Brake That Car Contest Day									
Overall Contribution Rating:
